Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 16-33, drawn to nucleic acid molecular hybridization assays, classified in class 435, subclass 6.
- II. Claims 34-36, drawn to methods for the identification of polymorphic markers using bit string arrays, classified in class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons. The methods of Groups I and II may each be practiced independently of the other.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

To search any two groups as outlined above would create an undue burden for the U.S. PTO because the searches of the non-patent literature are not only non-overlapping to any appreciable extent, but are also divergent in nature.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
